Web101 has had a few updates over the last few days. Realizing that some may not have an image editor that's capable of editing PSD files, I've included a blank logo image as the default (gif file format).

You should be able to load this into any image editor. If your editor allows it...change the image resolution to a higher value before making any changes. The image name is buisness003_slice_01.gif.
