Just updated a toy for Mambo 4.5.1 today.

Cleaned up some much needed problems with MOP for 4.5.1, nothin' too serious. Read below for some of the new features and fixes.

Get MOP for 4.5.1.
<http://mambo.webraydian.com/content/view/126/38/>

Features

You can now copy this module as many times as you like.

MOP can double as a simple hit counter. May need to enable Statistics...?

You can now hide every output that MOP can handle. Copy MOP and display member stats in one module, while another copy displays online users and even another to handle the groups counts, etc..

Stats area has a hits counter and you can hide the table output independent of each other.

...plus more...

Fixes

Fixed the table format output in Mozilla family browsers...

Put in img height and width attributes...

Reduced the height and width to fit text size...

Changed the table percents to reduce any squashing affect with images...

..other odds and ends... :)
