Last Updated Thursday, 08 December 2005

Run a reciprocal exchange within Mambo 4.5.0 Web Content Manager [Boon]. LE May run on Mambo / Joomla version 4.5.1 / 1.0+ or above.

What is a reciprocal link?

A reciprocal link is simply a link that is exchanged between two or more web sites. A means of spreading the news about your web site, while helping other webmasters/sysops to spread the news about theirs.

Exchanging links is considered by many people as one of the most effective ways to increase traffic to your website, but managing reciprocals and providing a quality exchange can be time consuming. Link Exchange provides a simply, but effective way to almost automate the link exchange process. The bottom line is simple, Reciprocal links can mean more visibility, more visibility will almost always generate more traffic and can also help boost search engine recognition. "nuf sed! :)"

- Static member link...

- Voting system for each member site
- Better e-mail results with signup
- Better form control with images and text
- Control the scroll members module text and links within admin

And more...

This Mambo Component is Released as GPL (Free) Software. Runs on Mambo and Joomla Content management Systems.

NOTES:

This component will display an error message when installing on Mambo v4.5.1+ (xml is missing), but still operates fine. This is a version compatibility issue.

Be sure to back up your Link Exchange table (if you want to save it) before you try a fresh install, because this script will remove the link exchange db; as a result you will lose all Link Exchange members and data (not your Mambo Members). NOTE: This component does not modify any default Mambo tables.
