TIH Module - This is the standard module that displays events on this day (today).  
TIH Random module - Pulls random events from the TIH DB. Covers all dates.  
TIH Volume Set 1a - The first volume of 1000 events FREE. Extract from the zip before uploading in TIH admin. area.  
TIH Volume Set 1b - The second volume of 1000 events FREE. Extract from the zip before uploading in TIH admin. area.  
TIH Volume Set 1c - The third volume of 1000 events FREE. Extract from the zip before uploading in TIH admin. area.  
Upgrade Package - Today In History upgrade SQL. Upgrade SQL from version 1.3 to 2.0. This is a manual install package. You'll need to unzip this package to your hard drive and read the upgrade information file for the details.

## Description

The Today In History component is a tool that will display events that happened on this day in History to your site visitors. The front end of the component allows for searching/sorting on the day/month of your events DB and comes with a generous MySQL file containing 1000 events to get you started. Although, there's nothing keeping you from adding your own.

TIH is optimized to handle large amounts of information and retrieve it FAST! Tests with this component were often ran with 10, 000 - 30, 000 events in the DB and TIH performed without a hiccup.

In version 2.0 the front end has been rewritten from scratch, playing paying close attention to speed and flexibility, while the back end code has been improved, but it still works mostly with the old code style.

## Features List:

- Event Manager - modify, add and remove and search events.
- Event Editor -
- Publish/Unpublish events -
- Advanced Events Search - search on day, month, year or event.
- Config Manager - modify global settings of TIH - (very weak)
- DB Sort Method - sort on a variety of table columns... back end only at this time.
- Limits - adjust the default drop list year and sleep time for DB processing.
- Format -
- DB Manager - manage TIH tables without 3rd party software.
- Upload SQL -
- Reset Event View -
- Optimize DB -
- Empty DB -

- Count Manager - quick view of event count per day.
- View your day count - keep track of the number of events you have in your DB for each day of the year.
- Help - not completed...
- Upgrade MySQL - upgrade SQL script offered for upgrading from version 1.3 to 2.0.
- Front Event Navigation - introducing the ability to view events on the front end, with day/month quick nav. and day/year searching.

NOTES: Thanks for lookin' and Enjoy!
